The health education session is designed for **WOMEN and MEN**. Women are encouraged to bring the men in your lives who are likely to benefit from knowing the risks of not being screened on a regular basis.

**Men with a family history of prostate cancer and African-Americans are at highest risk of having prostate cancer and should be screened much earlier than other men.**

**Only men get prostate cancer, but it is a disease that impacts the entire family. WIVES and loved ones must be actively involved to SAVE OUR MEN.**

This event is sponsored by Riverside Cancer Care Center, Tidewater Physicians Multi-specialty Group, Queen Street Baptist Church, Hampton Roads Prostate Health Forum and IDEA 2.0
